10

CASE NO. 04-CV-40023 RCL

11  
12 DECLARATION OF MICHAEL B. NELSON, D.O.

13 I, Michael B. Nelson, D.O., declare and state as follows:

14 1. I am currently the Chief of Health Programs for the  
15 Health Services Division, Bureau of Prisons (BOP) in  
16 Washington, D.C. I have been so employed since  
17 September 1999. In my capacity as Chief of Health  
18 Programs, I have had an ongoing active role in the  
19 development of the BOP policy and implementation  
20 guidelines regarding organ transplantation for  
21 inmates. I chair an advisory group appointed by the  
22 Medical Director, to review all requests for treatment  
23 which are characterized as "extraordinary care," to  
24 include many requests for organ transplants.

25  
26 2. I have had no specific role in the evaluation of Mr.  
27 Barron for possible kidney transplant. To my  
28 knowledge I have not been consulted with regard to any

1 specific issues regarding Mr. Barron's medical  
2 condition.

3  
4 3. BOP policy regarding organ transplantation was changed  
5 in February of 2000, in response to guidance from the  
6 Justice Department, as well as the increasing body of  
7 scientific literature supporting transplantation as a  
8 viable treatment option for certain conditions, such  
9 as renal failure. Contrary to the statements made in  
10 Mr. Barron's instant civil action, the revised BOP  
11 policy found in BOP Program Statement 6000.05, Chapter  
12 VI, §21, Health Services Manual, does not "mandate  
13 kidney transplantation." Rather, it states: "The  
14 Bureau will consider organ transplantation as a  
15 treatment option for inmates..." (emphasis mine.)  
16

17 4. Upon revision of BOP policy regarding organ  
18 transplantation, the seven Federal Medical Centers  
19 (FMCs) were directed to solicit contract services for  
20 organ transplantation from community hospitals within  
21 a 200 mile radius of the FMC. Solicitations were to  
22 include requests for the following types of organ  
23 transplants: kidney, liver, heart, and heart-lung. To  
24 date, we have only secured contracts for bone marrow  
25 transplants (one site), and living-related kidney  
26 transplants (two sites). These are major university  
27  
28

1 medical centers. All transplant centers contacted to  
2 date have expressed no interest in entering into a  
3 contract which would result in the placement of  
4 Federal inmates on waiting lists for cadaver organs.  
5 Although this could be attributed to bias or value  
6 judgements related to inmates, there are a number of  
7 legitimate practical considerations, primarily related  
8 to the current regional structure of the Organ  
9 Procurement Organizations. A full description of  
10 these issues is outside the scope of this declaration.  
11

12 5. There is no "community standard" with regard to kidney  
13 transplantation or the transplantation of other  
14 organs. Organ transplantation as the treatment of  
15 last resort for various conditions continues to be an  
16 evolving art and science. When deciding whether a  
17 given individual would benefit more from a kidney  
18 transplant than from continued dialysis, many factors  
19 must be considered. These factors include the age and  
20 general health of the patient, the effectiveness of  
21 current dialysis, the adequacy of vascular access for  
22 the dialysis procedure, and the presence of other  
23 chronic diseases or infections which may affect the  
24 long-term survival of a transplanted kidney.  
25

26 6. There are two additional specific assertions made by  
27  
28

1 Mr. Barron which I am able to address as a matter of  
2 policy. First, Mr. Barron states on page 8 that  
3 "...the defendants failed to act with the required  
4 organ sharing kidney donor list to exchange the kidney  
5 provided by the plaintiff's family members to gain the  
6 matched kidney for the plaintiff." There are a number  
7 of problems with this statement. First, there is no  
8 requirement for any transplant center to participate  
9 in an organ sharing arrangement, whereby an individual  
10 with willing but unmatched donors is given a matched,  
11 cadaver kidney in exchange for a kidney from a living  
12 donor. This is a relatively new concept, in an  
13 attempt to increase the supply of kidneys. This is  
14 ethically problematic in that there are risks to the  
15 living donor. The second problem with Mr. Barron's  
16 statement is the implication that the BOP can place an  
17 inmate on a waiting list for a cadaver organ. Only  
18 institutions which are accredited by the United  
19 Network for Organ Sharing (UNOS), and which perform  
20 organ transplants, may add or remove a patient from a  
21 waiting list. The second specific assertion I will  
22 refute is found on page 21: "The defendants delayed  
23 and denied the plaintiff's kidney transplantation  
24 protocol based on budget constraints." When BOP  
25 policy was changed in February, 2000, we recognized  
26 that the cost implications were significant. A  
27  
28

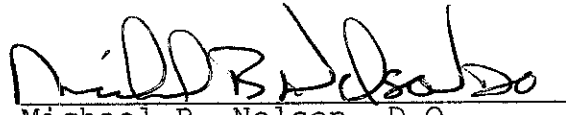

1 specific cost center was established to cover not only  
2 the cost of a transplant surgery, but also the array  
3 of medical evaluations required in order to determine  
4 if an inmate is an appropriate candidate to undergo  
5 transplantation. No specific ceiling was established  
6 for this cost center; all appropriate costs are  
7 applied against the BOP's overall health care budget.  
8 That being said, the man-hours required to evaluate of  
9 over 200 inmates on dialysis for transplant  
10 consideration needs to be balanced against the  
11 delivery of medically necessary health care to a  
12 population of 4000 inmates being treated at any one  
13 time at all of the FMCs.

- 14
- 15 7. Throughout Mr. Barron's complaint runs the allegation  
16 that the BOP has not acted in a timely manner with  
17 regard to his evaluation for a possible kidney  
18 transplant. Globally, when considering how to  
19 prioritize these evaluations in the context of the  
20 management of many other inmates with significant  
21 medical needs, the logical approach is to identify  
22 those inmates on dialysis who are the most ill, but  
23 still healthy enough to tolerate the surgery and the  
24 rigorous post-transplant lifestyle. For dialysis  
25 patients, the highest priority should be given to  
26 those who have extremely limited vascular access

1 through which to continue dialysis, and those whose  
2 condition is consistently deteriorating despite  
3 dialysis. To my knowledge Mr. Barron does not meet  
4 either of these two criteria, yet over the past three  
5 years has undergone a stepwise evaluation toward the  
6 possibility of transplantation. The inmates who have  
7 been reviewed at the Central Office level for  
8 transplant consideration, on the other hand, do meet  
9 one or both of those acuity criteria.

10  
11 I declare under penalty of perjury pursuant to 28 U.S.C.  
12 § 1746 that the foregoing is true and correct.

13 Executed this 24<sup>TH</sup> day of May, 2004, in  
14 Washington, D.C.
